

Sustainable Development

The concept of sustainable development is a key consideration of the planning, design and construction of the Eastern Village.

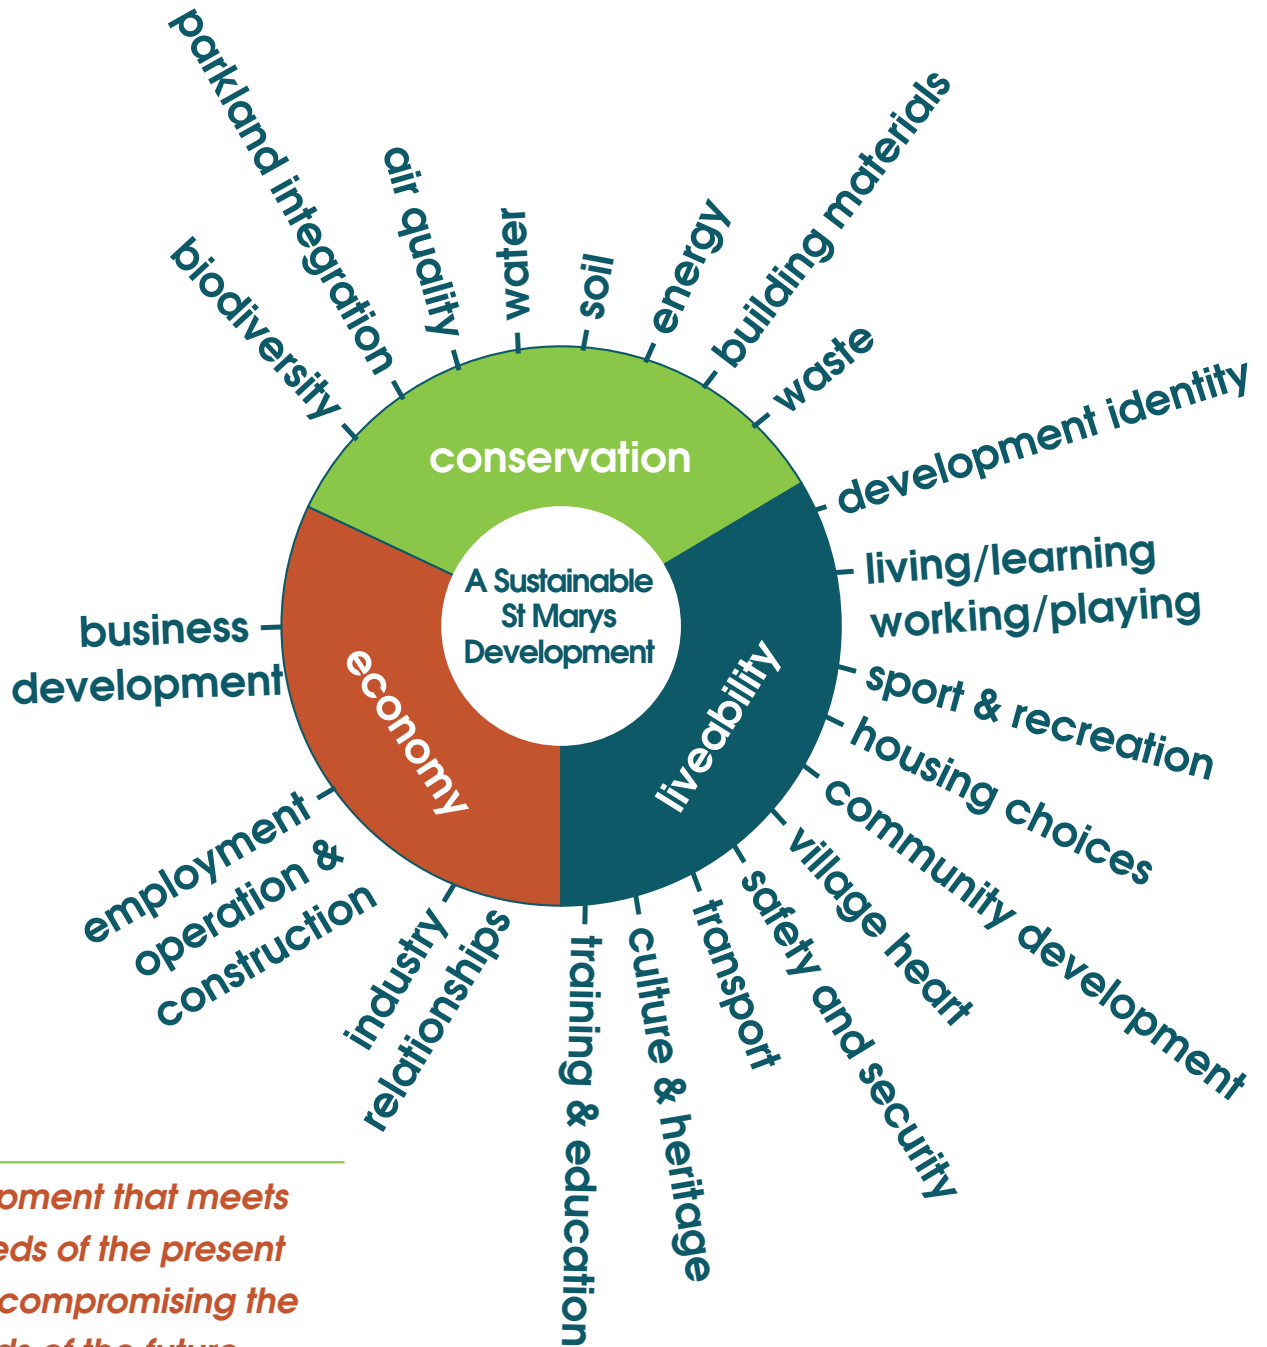

Development in the Eastern Village will balance environmental, social and economic values.

What is Sustainable Development?

Two well respected definitions of sustainable development are:

"Development that uses, conserves and enhances the community's resources so that ecological processes, on which life depends, are maintained and the total quality of life now and in the future can be increased."
(National Strategy for Ecologically Sustainable Development, 1992)

"Development that meets the needs of the present without compromising the ability of future generations to meet their own needs" (Rio Earth Summit, 1992)

Development that meets the needs of the present without compromising the needs of the future
